

OLEO-MAC gasoline-powered chainsaw

Supplied with 4 chains for extended use.

Model: EFE-33-GS-51

Our chainsaw is designed for demanding and prolonged operations in critical environments.

Equipped with an aluminum crankcase, it provides enhanced resistance to stress and ensures consistent performance even when using large guide bars.

It features a large filtration surface for optimal engine protection in highly dusty environments, ensuring long service life. The cylinder and two-ring piston are engineered for intensive and extended use.

The integrated ON-BOARD clutch, with clutch drum and brake band housed within the engine unit, prevents the intrusion of foreign particles between the centrifugal masses, ensuring reliable operation and simplifying maintenance when removing the chain protection cover.

An anti-vibration system with six dampers—two spring-mounted and four rubber—effectively isolates the operator from vibrations, providing greater comfort during operation.

The saw includes a multifunction lever (combining choke/start/stop controls into a single control for simplified starting and stopping), a decompression valve, and a side-mounted chain tensioner.

Brand: **OLEO-MAC**
Model: EFE-33-GS-51
Origin: ITALY
year of production: 2026/2027

OLEO-MAC gasoline-powered chainsaw

Technical specifications	Value
Engine type	2-stroke engine.
Guide bar	46 cm or 51 cm
Chain pitch x gauge	3/8" x 0.058"
Power	3.5 kW / 4.7 hp
Displacement	63.4 cm ³
Sound pressure / sound power	103 dB / 115 dB
Primer	No
Multifunction lever	Standard
Professional anti-vibration system	Standard
Long-life filtration	Standard
On-board clutch	Standard
Adjustable oil pump	Standard
Chain tensioner	Side-mounted
Ice Device	Standard
Decompression valve	Standard
Weight (without guide bar and chain)	6.5 kg
Warranty	2 years (legal warranty) + 3 years (commercial extension)*
